

QR CODE SYSTEM

Have you ever had testing and tagging done before? If yes, then you probably received a simple sheet with little information, no traceability or editability of your assets.

We've seen this time and again and because we wanted to offer you the best asset management you can experience, we have come up with our **QR Code System**.

Once our Technicians are onsite they will conduct the necessary tests and provide you a unique QR code for each appliance. Because our TESTntel System now connects via bluetooth with our tester machines, we're able to load photos of your appliances in real-time.

You will have a detailed and relevant description of your appliances, as well as a photographic inventory, traceability and editing capabilities like reporting if an item is faulty. All you need to do is scan our QR code to be taken to your online database.

OUR PROCESS

1) Upon completion of the electrical inspection of each appliance our Technician will apply our QR Code and barcode to each item.

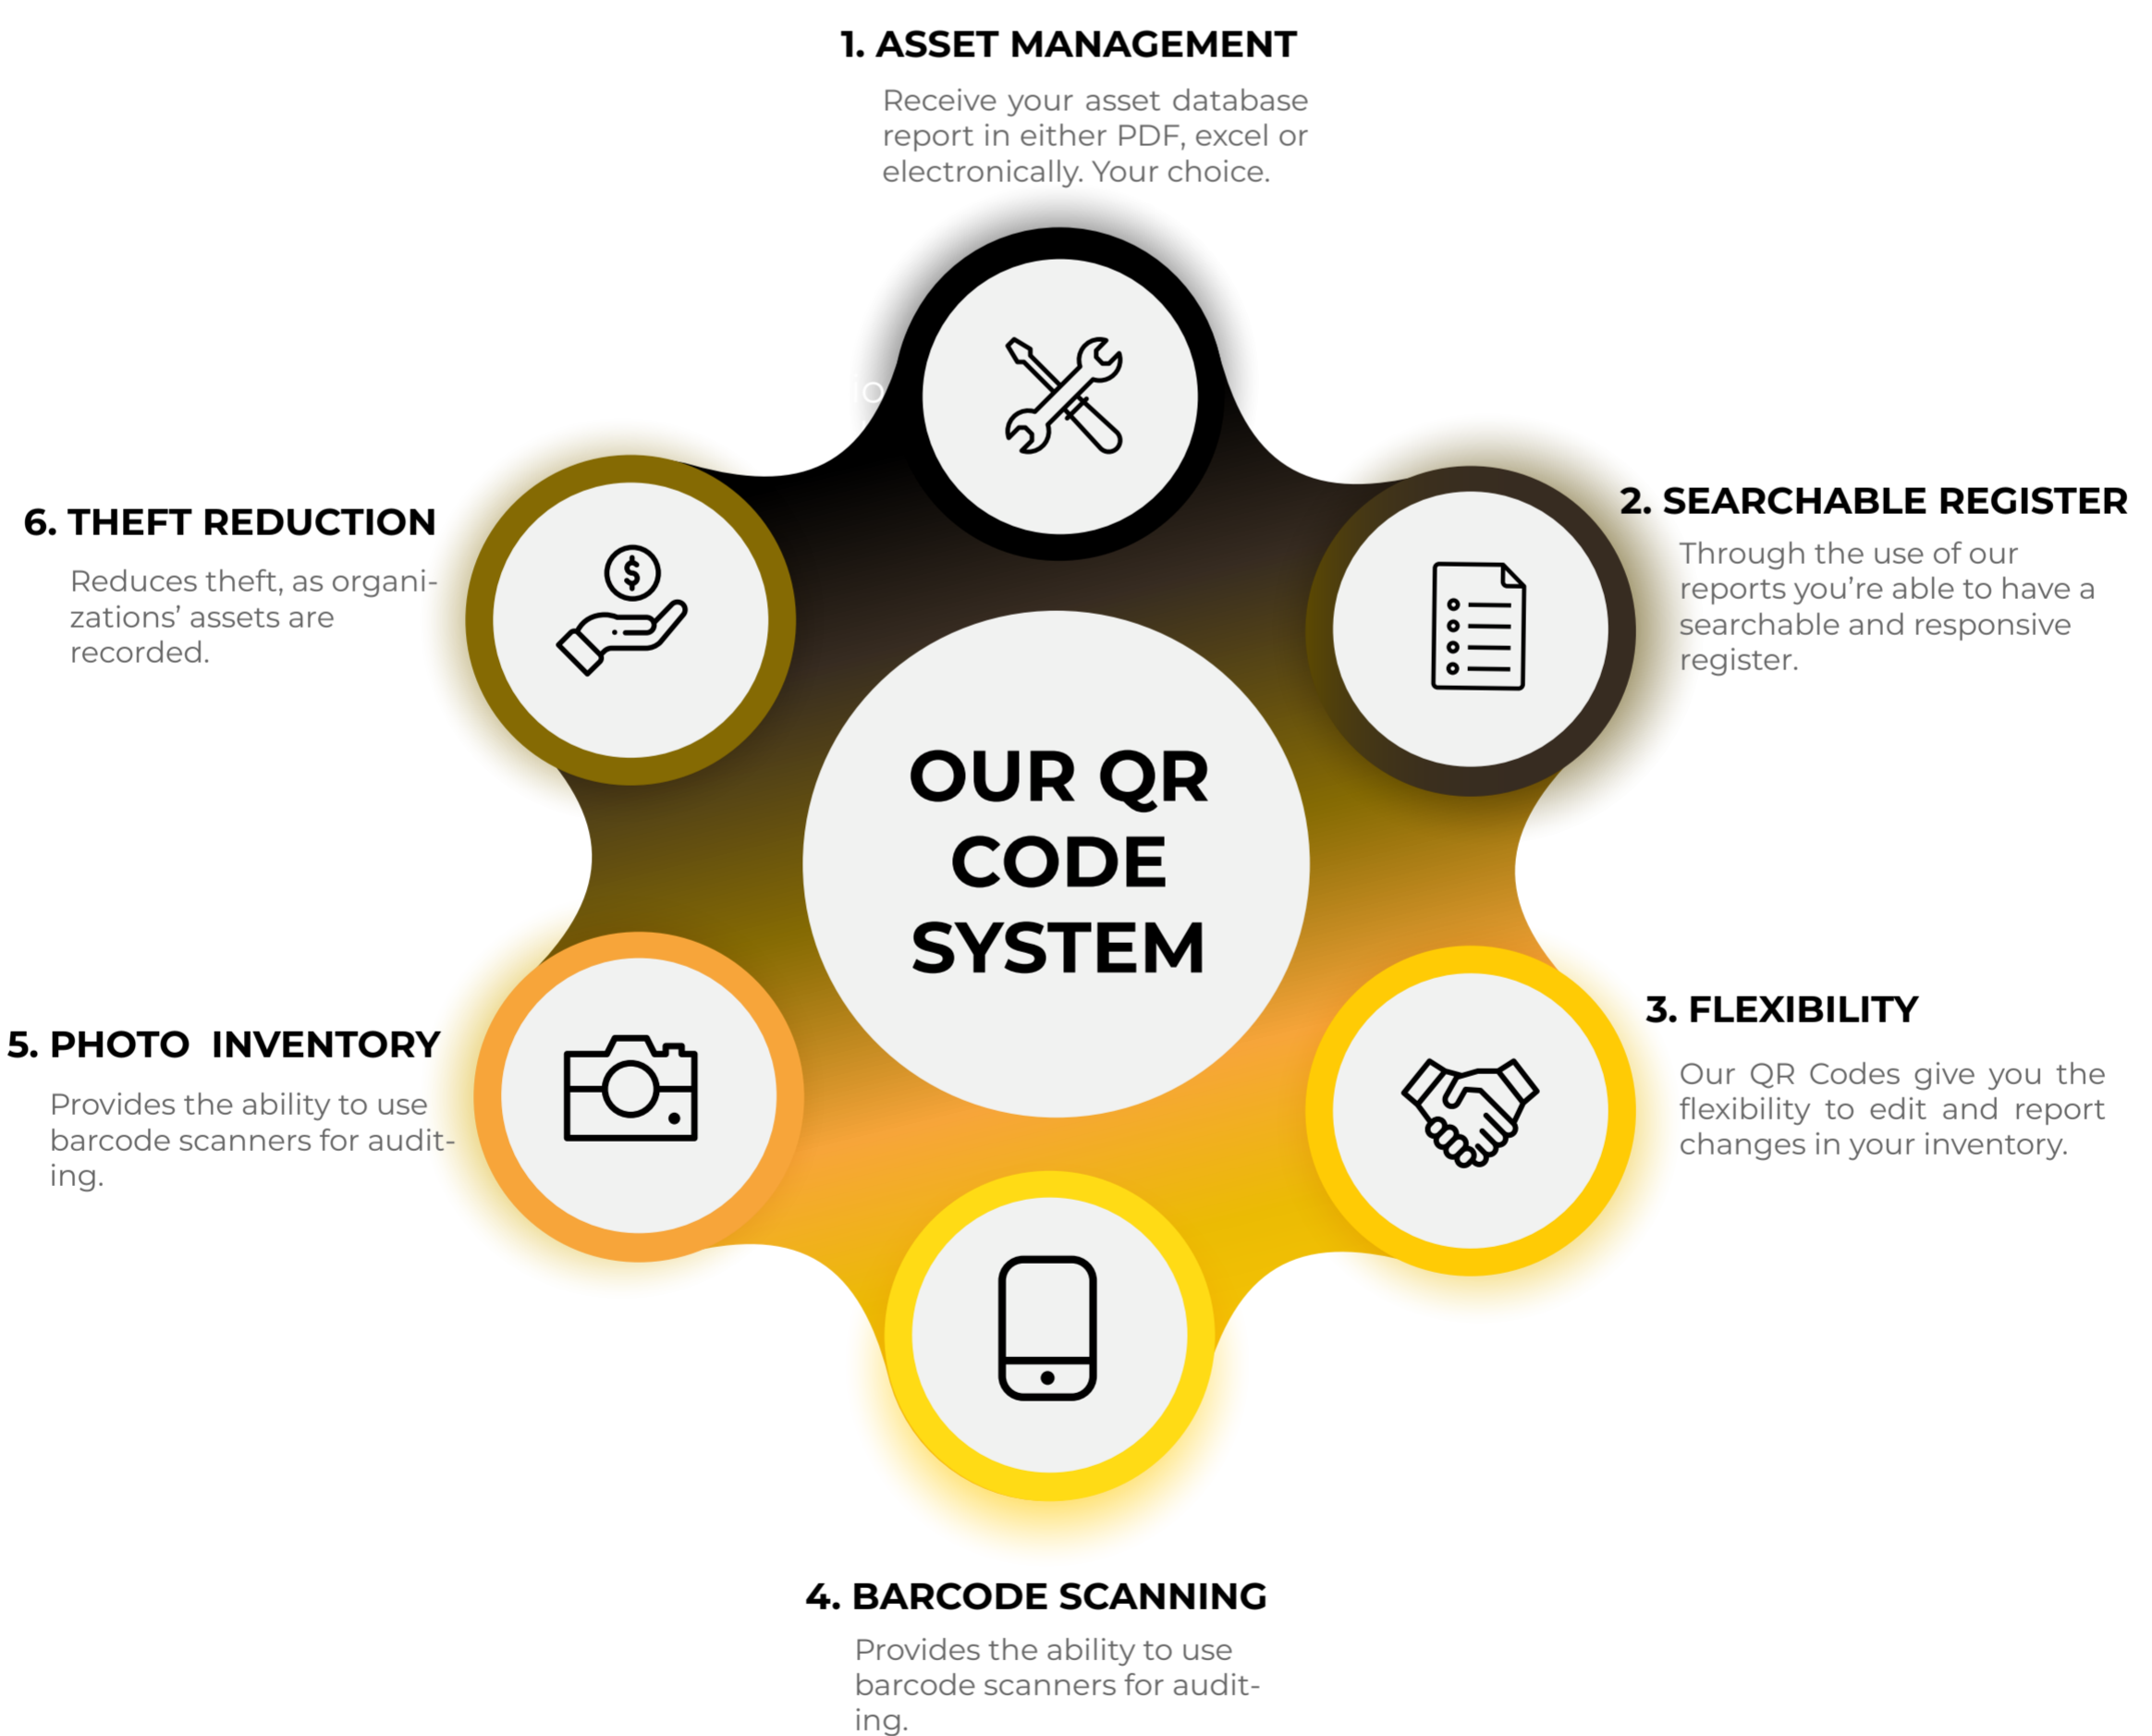

2) Our Technician will take a picture of your appliance, so it can be loaded into our system and linked to the QR Code.

3) That's it! Now you can have full control of your inventory.

BENEFITS OF OUR QR CODES

Our mission is to constantly innovate our systems to serve you better. See below the six main benefits of using our QR Code System:

0800 837 8824
Scan QR code to report faulty item or for service request.

Bring your asset management to the future with us!
